Trans. of unidentified German language mono. sent in
by The South German Laboratory in Mosbach, n. d.

DESCRIPTORS: *Electron lenses, Electron micro-
scopes, Electron optics, Optical equipment.

The usefulness of the electron microscope at high
magnifications is affected by aperture errors and
chromatic aberration. Both errors are unavoidable as
long as the image forming fields are rotation sym-
metric, charge free and constant in time. The present
study demonstrates that the elimination of any of the
three conditions suffices to pave the way to spherical
and chromatic correction resulting in a worthwhile
increase of the resolving power. (Author)
