FOREWORD

This bibliography of economic and scientific and technical guide requirements has been compiled by the various intelligence components of the U.S. government in support of their intelligence production responsibilities and to provide a convenient reference for collectors of intelligence as well as for those individuals concerned with production and requirements. The bibliography is composed of the more significant requirements and collection guidance materials in the fields of foreign economic and scientific and technical activities as determined by the EIC Subcommittee on Requirements and Facilities for Collation. The bibliography was reviewed and concurred in by the Economic Intelligence Committee, the Scientific Estimates Committee, the Joint Atomic Energy Intelligence Committee, and the Guided Missiles Intelligence Committee.

The subjects in the bibliography have been arranged alphabetically, and an attempt has been made to avoid overlapping among the categories. Requirements and guidance materials which are composed of a wide variety of subjects have been included under the heading "General."

The following three criteria have been applied in the compilation of the bibliography:

1. Limited subject matter. The bibliography is limited to certain foreign economic and scientific and technical subjects which, in a general way, are the common targets of many collectors. Subjects which primarily interest only one intelligence organization, such as political and sociological items of primary interest to the Department of State and air order of battle items of primary concern to the Department of the Air Force, ~~have~~ have been omitted. *delete*

2. Long-term requirements. The bibliography is limited to guidance requirements that cover subjects of basic intelligence interest and that will remain active as tools for collection purposes for a relatively long period. Short-term requirements as well as those subject to frequent revision have not been included.

3. General applicability. The bibliography is limited to those requirements which are applicable to exploitation of many sources of intelligence information. Specific requirements directed at one-time, one-source exploitation are, therefore, not included.

- iii -

S-E-C-R-E-T

The bibliography is designed to serve a dual purpose:

1. To eliminate unnecessary duplication. Most members of the intelligence community issue economic and scientific and technical requirements. This bibliography enables members of the community to determine whether the standing requirements and guidance materials already published might be usable in whole or in part in their own collection effort. The use of existing material would avoid unnecessary duplication and all members of the intelligence community would gain from the interchange and use of requirements published by other members.

2. As a collection aid. Extensive distribution of this bibliography could show collectors the extent of permanent requirements and guidance material available for use as collection instruments. In the absence of specific requirements for specialized sources, the non-technical collector could improve exploitation by reference to particular collection guides listed herein.

The following abbreviations are used in this bibliography:

Air Force

- AFM - Air Force Manual
- ICGL - Intelligence Collection Guidance Letter
- ICGM - Intelligence Collection Guidance Manual

Army

- DAP - Department of Army Pamphlet
- ICG - Intelligence Collection Guide
- ICM - Intelligence Collection Memorandum

CIA

- 
- ORR - Office of Research and Reports
- OSI - Office of Scientific Intelligence
- 
- SI - Scientific Intelligence
