The Director of Central Intelligence
Washington, D.C. 20505

Intelligence Research and Development Council

21 JUN 1989

IR&DC 520-89

MEMORANDUM FOR: Members Intelligence Research and Development Council

25X1 SUBJECT: Development of a Technology Road Map [redacted]

1. The Council has been asked by the Deputy Director of Central Intelligence to prepare a technical assessment that identifies a National Foreign Intelligence Program (NFIP) technology road map for the late 1990's and the early 2000's. The assessment is to provide an outline of technical goals and objectives, which may be used for the development of long range R&D programs. In this vein, the assessment will draw on strategic guidance contained in Intelligence Community planning documents such as the DCI's National Foreign Intelligence Strategy. [redacted]

2. The study is to indicate what technical problems now face NFIP research and development managers and what steps should be taken in order to prepare for the Intelligence environment of the future. In addition, the study will consider critical technologies that may impact in later years on the NFIP and provide an assessment of their application and feasibility, similar to the Department of Defense Critical Technologies Plan. [redacted]

3. Mr. Robert Herd, Director of the Office of Research and Development, Central Intelligence Agency, has agreed to provide for the study and has asked [redacted] Chief, Advanced Concepts Staff, to manage the study's completion. [redacted]

4. The study should be presented to the Council for consideration in February 1990. I ask that you provide support as may be required for the completion of this task. [redacted]

[redacted]
Chairman
