REMARKS

Draft ISSG/OS policy on personal computers.
 Pls provide comments to by COB
 21 March
 Thank you.

Rick

STAT
 Rick/Fred
 This may be the most ridiculous policy ever of SSQ. IF this goes on the books, it means that ISSG's approach to problem solving is to keep the technology out of the building thereby not requiring anyone to have to solve it. dumb, dumb, dumb.
 The next standard term will be not only it not being a P.C. but ought to be

DO NOT use this form as a RECORD of approvals, concurrences, disposals, clearances, and similar actions

Policy Number 14 Personal Computers* for Headquarters** Applications

Information Systems Security Group policy is to restrict the use of personal microcomputers to only those applications which can be solidly justified for reasons such as efficiency and substantial cost savings, and where demonstrably robust security controls exist.

The Information Systems Security Group recognizes that some personal microcomputers will be required for unclassified applications. Our experience to date, however, clearly indicates that the presence of unclassified word and data processing equipment in classified program/project areas creates the very real danger of contamination of the unclassified system in spite of conscientious efforts on the part of well intentioned individuals to prevent such occurrences. For this reason, all processing which occurs in classified program/project areas will be presumed to be classified and must be controlled accordingly.

In those selected cases where sufficient management justification exists, the use of personal microcomputers for the processing of Agency official information in a work-related capacity in a classified program/project area may be approved providing:

- a. The use of personal microcomputer equipment, in each case, is approved by the Information Systems Security Group, Office of Security and the program/project Manager.
- b. The personal microcomputer equipment is TEMPEST approved, or otherwise controlled, in accordance with standards published by the Office of Communications.
- c. The program/project manager creates, publishes and promulgates written procedures designed to securely control the use of personal computers, and all associated magnetic storage media and printed output.

* A personal computer is defined as one which (a) is easily transportable, (b) possesses limited software capabilities, and (c) costs less than \$5,000.00.

** The headquarters building, the Agency training centers and Agency owned or leased facilities located in the Washington D.C. metropolitan area.

d. The published procedures are coordinated with the assigned Information System Security Officer (ISSO), approved by the Chief, Information Systems Security Group, and include strict procedures to:

(1) Maintain definite segregation of unclassified activities from classified activities.

(2) Provide for the use of unique identification labels for all magnetic media associated with personal microcomputers.

(3) Provide for the definite segregation of unclassified personal microcomputer printed output from classified program/project printed output.

(4) Prevent the removal of all personal microcomputer magnetic media from the facility.

(5) Provide for the strict control of all magnetic media used for diagnostics and maintenance of personal microcomputer systems.

(6) Prevent relocation of personal microcomputers within the program/project area without the written approval of the assigned Information Systems Security Officer.

(7) Prevent the removal of personal microcomputers from the program/project area without the written approval of the assigned Information Systems Security Officer.

e. Each such approved personal microcomputer system is available for periodic security audits by the Information System Security Group, Office of Security.

NOTE TO: See Distribution

Attached is a updated list of Agency acquisitions of personal computers compiled by Policy and Plans Group, Management Staff. This list represents external procurements forwarded for the D/ODP's concurrence as per [redacted] that were processed as of 20 May 1984, Delta Data personal computer installations through 15 October 1983 and internal ODP PC purchases. The Delta Data installations have been verified, however, the remaining data represents only those Agency procurement requests which were routed through ODP Management Staff. Also, the Office of Communication's purchases of Wang ICST and IBM PC units through the OC-managed contracts have not been included. The listed Delta Data units may also function as terminals as well as local PCs.
