SG1A

MEMORANDUM FOR THE RECORD

SG1A

SUBJECT: Unconfirmed Source Information, Pertaining to [REDACTED]

*Interesting but not much can be done with this Area is very different from description*

1. (U) The following information applies:

a. (S) Source stated that in the vicinity of the above coordinates there is a long valley between high rugged hills with a river running down the center of the valley.

b. (S) Source stated that there appeared to be a constricted area at one end of the valley in the form of "like two V's coming together" and he stated that this seems to be a point of interest.

c. (S) He stated that whatever flows through the valley or the constricted area is also constricted by that narrow portion.

d. (S) The Source stated that looking down on the area he could detect some sort of object (apparently he was looking down from a considerable height) around which you could see a flow, like a ship with bow waves.

e. (S) The Source also stated that the two V-shaped objects appeared to be two dimensional looking down on them, and the V-end of each object (or apex) appeared to be almost 90 degrees and very nearly touching. He stated the Flow (?) is from right to left within the valley as well as the Rivers flow is from right to left.

f. (S) The object described by the Source as like a ship with bow waves was also described as like "...a pointed object in a wind tunnel."

2. (S) Request the above information be evaluated and comments be provided to the undersigned no later than 02 June 1980, this will permit a full evaluation of the sources information for accuracy and intelligence value.
