Captivity

Site is land/structure interped involving several structures. One is tall & angular; the others, a group, have a rounded component & involve some subterranean element. Surrounding land is relatively flat, w/ short grass, probably an encompassing fence. A very noticeable & unpleasant smell is associated w/ site. Site evinces a pronounced negative emotional feel-involvement to some extent, fear, reluctance, sadness, loneliness, site feelings, apprehension, etc. People are in some way involved w/ site. Presently site maintains a certain level of positive tension/apprehension. At a certain point in the past an event occurred or situation existed related that was of considerable greater magnitude of veygurance & unpleasantness.
