Site involves many smaller structures or objects in a land setting, perhaps with considerable area of sand. Humbling + machine noises are present, even pronounced, along with a sense of heat + suspense, pungent smells.

Some event occurs at site amongst structures, strongly suggesting idea of explosion or detonation. Thermal effects are significant. Event may be caused by some sort of object or projectile or missile originating distantly in a rugged, broken, mountainous area, crossing open terrain, & arriving w/ a destination of a large, elaborate, old, historically & culturally significant structure currently in use.

Other objects appear to have been "launched," but don't "make it" to destination. Object or projectile seems to be unmanned; some sense that object impacts large structure causing significant structural damage, & perhaps thermal damage also.

Damage to humans is probable.

Seem to occur in daytime.
