

Project CY 8609

Task

1. Describe the Technical Facility located vic:

SG1A

2. Within the following ten year period determine if and when any "special events" occur:

* Note: If you do find any "special events" - - - subsequent sessions will be focused on each separate "special event."

~~SECRET~~/NOFORN-SKEET CHANNELS ONLY

There is a cool vapor associated with one rounded structure. Machine noises and hums are present. A tall structure is present. During the period Aug-Oct 1984 an event occurred inside one of the structures. This event caught at least one person unawares (possibly injuring or killing him) and caused much "chagrin" among those not in the immediate area of this "industrial accident." Event was centered in a "reaction room" (AOL-"nuclear reactor"); "controls" involved. It was sudden, "contained" and lethal. (The color green is strongly associated with these ideas). The person (or possibly people) injured or killed experienced only a sharp sound/flash. An "agency" and the sense of "embarrassment" is connected. The extent of physical and figurative damage was "managed" and suppressed.

4. (S/NF/SK) Feedback: None. *(But Source CRAVES FOR IT).*

Shock

floor

~~to~~

S 4 1/2 too fast to even be surprised.

Site is structure w/in large facility.
Structure is separate off, controlled access, solid/dense bed.
" " large, tall, massive, + produces s'thdy.
people work here. Sometime ca. Aug - Oct. 84
something happened inside the reaction/operation room.
A person (in a very plain at a very time) was
directly involved. People outside were charged
& wanted to suppress knowledge of event. Agency
involved was concerned about embarrassment. Incident
was "contained." Person involved experienced shock,
event occurred too fast even to be surprised.
