~~SECRET~~/NOFORN - HANDLE VIA SKEET CHANNELS ONLY

PROJECT SUN STREAK (U)

WARNING NOTICE: INTELLIGENCE SOURCES AND METHODS INVOLVED

PROJECT NUMBER: 8802	SESSION NUMBER: 2
DATE OF SESSION: 24 MAR 88	DATE OF REPORT: 2 ⁸ MAR 88
START: 1313	END: 1339
METHODOLOGY: CRV	VIEWER IDENTIFIER: 003

1. (S/NF/SK) MISSION: Describe the contents of a building (photo provided) in the Soviet Union (coordinates 275601/958588). Also, provide information on the dimensions and features of the target building, the immediate surroundings, general geographic location, and function and use of the contents of the building.

2. (S/NF/SK) VIEWER TASKING: 003 was informed that this session would attempt to revisit (without AOL) the same site as that of 10 March 88. After successfully acquiring the site in Stages 1/2/3, the viewer was moved inside the target structure to explore. Afterwards, 003 was tasked with searching a time line, bounded by the recent past and the near future, for any perceived change in the area.

3. (S/NF/SK) COMMENTS: Excellent session; corroborates and, to a certain degree, augments information provided by Sources 018, 079, and 011.

Handwritten notes:

~~SECRET~~/NOFORN - SKEET CHANNELS ONLY

CLASSIFIED BY: DIA-DT
DECLASSIFY : OADR

Site involves a group of structures, one of which is larger and more significant than the others. There are fairly large rounded objects in the immediate vicinity, AOL of microwave dishes. In the middle distance, the terrain includes trees, low hills, people, and cars. The structure of interest itself involves a considerable amount of white and brightness, metal, rooms, corridors, and glass. Some rooms are spacious and specialized, and even seem more spacious than they are because there is so much brightness and white. There is gleaming and chrome-appearing metal that is curving, rounded, and long "like" stainless steel tubing or pipes. There are people present, going and coming, moving things and participating in ongoing activities. It is "like" a hospital, but more intricate. "Micro-segments", "microscale", elaborate, detailed, complex, and assemblage, all pertain to this aspect of the site.

Sometime in the not-distant future an "event" is scheduled to occur, involving the functioning of technical equipment which is "like" a trial run, or like the first operation of a practical prototype. This seems to be centered around an object/machine that is well made, metallic, mechanical, and electrical and electronic, that is horizontal, with concepts of "test bed" but with practical applications. It is complex, and reminds me of the arming/functioning mechanism for a nuclear device--or at least something as precise and complex.

Presently it's "like" it's being assembled, but "assembled" is almost too simplistic a word. The people putting it together have a task that's so complex--they have to often get things/parts into the proper relative position one to another in very tight tolerances and without being able to have direct observation as to what they're doing--almost have to "feel" as they put it together.

S4 1/2 things going, masking, integration. "Like" total run "like" first practical prototype sort of operation. Seems to be centered around an object/machine that is well made, metallic, mechanical & ductile & electronic that is horizontal, w/ concept of "test bed" but practical application. Complex. Reminds me of armory/food, main mechanism on nuclear device - or at least somewhat as precise and complex.

S4 1/2 it's "like" it's being assembled, but "assembled" is almost too simplistic a word. The people putting it together have a task that's so complex - they have to often get things into the proper position one to another in very tight tolerance & without ^{parts} having direct observation as to what they're doing - almost have to "feel" as they put it together.
