UNITED STATES GOVERNMENT

## memorandum

DATE: 29 OCT 90

REPLY TO  
ATTN OF: DT-S

SUBJECT: SUN STREAK Report 90104 - G (U)

DT-5  
DT

TO:

1. (S/NF/SK) Three remote viewing sessions were conducted on 26 and 29 October 1990 in an effort to describe the imminent use, if any, of Iraqi "fuel-air-explosives" against US and coalition forces in Saudi Arabia. If affirmative, additional efforts should be pursued to determine the current location of the "fuel-air" explosives and to determine their target objectives.
2. (S/NF/SK) Remote Viewer 025 indicated there would be no immediate use made of fuel-air explosives. Viewer 025 was unable to determine the current location of the fuel-air explosives. The results of 025's effort are at TAB A.
3. (S/NF/SK) Remote Viewer 052 projected the possible use of fuel-air explosives against US and coalition forces in Saudi Arabia for 8 November 1990. Viewer 052 indicated three locations in Iraq, where such explosives are currently located. The sites were located at geographical coordinates 31°55'N/44°50'E, 33°15'N/43°10'E; and 30°10'N/46°50'E. See strip map at TAB B. The two principal target objectives in Saudi Arabia were

identified as being located at geographical coordinates 26°20'N/43°020'E and at 24°50'N/47°05'E. See copy of strip map at TAB C. A representational sketch of the fuel-air explosive is at TAB D. Because 052 perceived the occurrence of a meeting apparently related to the fuel-air explosives, a second session was conducted on 29 October in an effort to obtain data related to specific plans and intentions. 052 was unable to identify and describe pertinent indicators. The results of 052's two sessions are at TAB E.

4. (S/NF/SK) OPS COMMENTS: Remote Viewer 052 appears to be on target; however, 052's projection of the occurrence in future time, specifically 8 November 1990, is highly doubtful. Data related to the current location of the fuel-air explosives has more plausibility by virtue of the fact that it does not address an issue in future time.
