SG1A

1. (S/STD/NF) On 18 May 1990, four remote viewers 095, 018, 025, and 049 conducted one solo session each in an effort to answer requirements against the suspected narcotics smuggling vessel known as the [redacted]. The fifty-foot sailing vessel, with a white hull and bearing Registry Number, [redacted] departed Cartajena, Columbia on 8 May 1990 enroute for the Island of Curacao at 12 Degrees 30 Minutes North and 69 Degrees West. Curacao is located about 180 miles east of the Peninsula de la Guajara, Columbia. The ultimate destination of the drugs is believed to be somewhere along the southeast coast of the United States. The FBI is as follows:

SG1A

- a. Determine the current location of the target vessel.
- b. Determine if the vessel is currently carrying drugs, if so, where stored aboard ship.
- c. Where and when will the target vessel off-load/transfer the contraband in the form of drugs.
- d. What is the ultimate destination of the contraband in the US.

2. (S/STD/NF) 095 reported that the vessel is currently (19 May 90) located northwest of the Antilles at 07 Degrees 21 Minutes North and 12 Degrees 33 Minutes West, heading due northeast. The vessel is currently carrying contraband in the form of 5-6 kilograms of cocaine. The cocaine is located at midships just to the portside of the center of the vessel at the waterline. The cocaine has been molded into something brown, smooth, and plastic. There was the impression that because of this it could not be smelled by dogs. To get the cocaine out, the brown thing has to be destroyed/broken. The cocaine will be off-loaded to another vessel on 21 (if not then, 22) May 1990 between 1800-2000L. The ultimate destination of the drugs is mideastern US.

3. (S/STD/NF) 018 reported that the vessel is in port in a marina at approximately 12 Degrees 15 Minutes North and 67 Degrees 30 Minutes West. The vessel is carrying contraband in the bilge (waste water) tank. The drugs are presently waiting for someone to come by the marina to pick up the drugs. The drugs will be delivered to a home at house address #5 on a "CORK" or "DRIFTWOOD" road/lane/street/etc. The drugs will be off-loaded on the southwest tip of Florida, at approximately 25 Degrees North and 80 Degrees 45 Minutes West.

4. (S/STD/NF) 025 reported that the vessel can be located at 11 Degrees 12 Minutes North and 62 Degrees West. The vessel is currently carrying heroin. It is packaged in pouches and the term "terrain station" surfaced as to the location of the drugs aboard ship. The ultimate destination of the drugs is Puerto Rico.

5. (S/STD/NF) 049 reported that the target vessel is currently located at 79 Degrees West and 19 Degrees 20 Minutes North between Jamaica and Grand Cayman Island. It is traveling in a northwesterly direction. The target is carrying contraband. However, the narcotics are not a conventional type of cocaine; it is solid, dense, and tightly packaged. The contraband is associated with long tubes which resemble the type used for storing navigational charts. These tubes, in turn, are hidden within a cavity in the bow area of the vessel. The contraband is to transferred to another vessel at sea south of the Ferrebonne Bay area of southern Louisiana (between 90 and 91 Degrees West and 28 and 29 Degrees North. This will take place during the Memorial Day period. The vessel receiving the cargo resembles a small fishing trawler or "shrimper." It's nets are frayed and the characters "V, T, 7, 0, and 3" are associated with this boat in some way. There is a tall, heavy-set man with a heavy black beard and untucked flannel shirt on the pick-up boat. The pick-up time is early morning and it is gray and foggy. The pick-up boat will come from an area which is predominately tidal estuary. The destination of the contraband is a location associated with the name of Flambeau or Flanareaux. The tubes which are associated with the contraband are 3 1/2 to 4 inches in diameter and 3 feet long. They resemble navigational chart tubes. These tubes are both stacked vertically and horizontally a cavity in the bow of the vessel. The tubes rather resemble a bangalore torpedo. The cavity occurs behind the bow-side wall of a small room or where a passageway widens a bit. There is a triangular shaped wooden object which sits center and attached to this wall. Cushion covered benches are on either side of this wooden object. There are window or portholes above some of the benches. The wooden object is reddish with tan trim. It is

DSCINT Task # 9026

Source # 025
Date to Proj. Ofc. 5/18/90

ESSENTIAL ELEMENTS OF INFORMATION REQUESTED IN ORDER OF PRIORITY

1. Determine the current location of the target vessel
RESPONSE: The vessel can be located at 11°12'N-62°W.

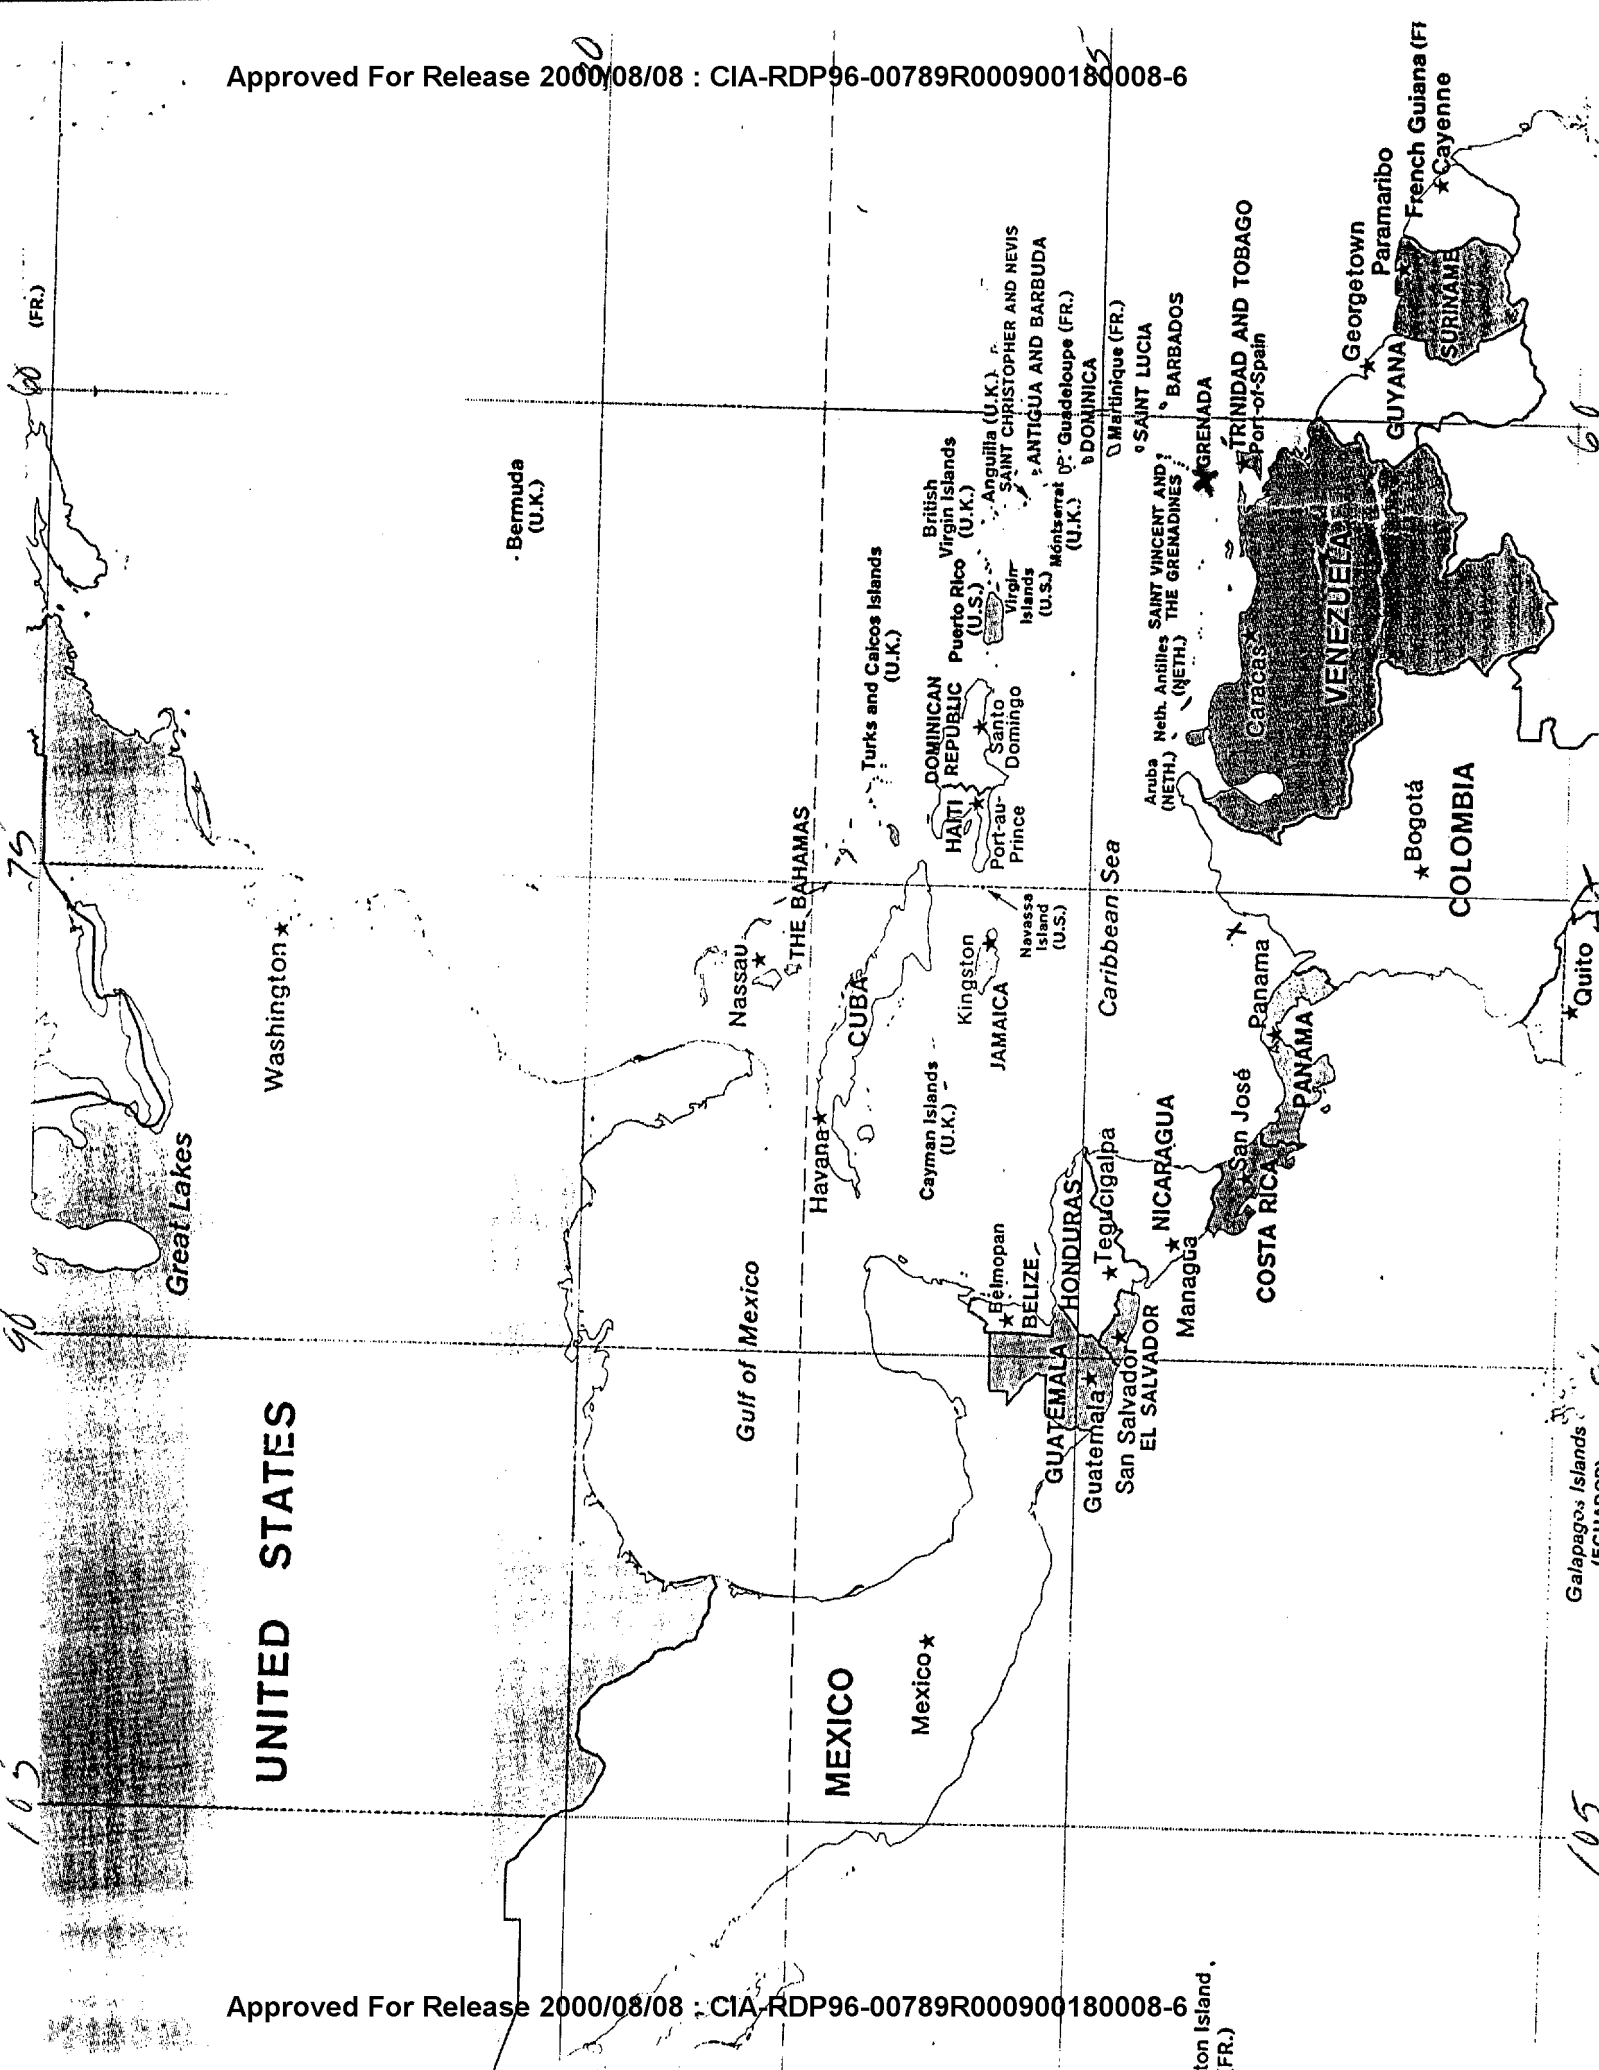

2. Determine if the vessel is currently carrying drugs; if so, where aboard ship.
RESPONSE: Yes. Heroin is packaged in pouches. The terms "terrain station" surfaced as to the location of the drugs aboard ship.

3. where & when will the target vessel off-load/transfer the contraband in the form of drugs
RESPONSE: _____

4. What is the ultimate destination of the contraband in the U.S.
RESPONSE: The ultimate destination of the drugs is Puerto Rico.
