PROJECT SUN STREAK

WARNING NOTICE: INTELLIGENCE SOURCES AND METHODS INVOLVED

PROJECT NUMBER: S4 TRNG 94      SESSION NUMBER: 1  
DATE OF SESSION: 881018      DATE OF REPORT: 881028  
START: 1430      END: 1530  
METHODOLOGY: CRV      VIEWER IDENTIFIER: 032

1. (S/NF/SK) MISSION: Access and describe in a stage one sense training target # 94, Steam Plant, CA.
2. (S/NF/SK) VIEWER TASKING: Encrypted coordinates 384819/122481.
3. (S/NF/SK) COMMENTS: Stages 1-3 were executed perfectly. In stage 4, however, 032 went into AOL drive. The only cause for the drive I could determine was 032's severe cold. His congestion was so bad he could hardly breathe. This cold was several times worse any of 032's previous colds (which he worked through without any difficulty). To avoid another failed session, I will wait until his cold subsides before working again.
4. EVALUATION: 2. *oh*

GEOTHERMAL ENERGY

# The Power of Letting Off Steam

By KENNETH F. WEAVER  
ASSISTANT EDITOR

**T**HE SMELL OF BRIMSTONE hung on the air. Steam vents hissed at me like snakes. Craters of boiling mud seethed and burped; black bubbles formed, swelled, and collapsed with rude plops.

Heat had created a scabrous landscape almost devoid of vegetation and stained with yellow streaks of sulfur and the white crusts of mineral salts. It suggested an outpost of Dante's Inferno—although it bore the more earthly name Laguna Volcano.

Only a short distance away, towering plumes of steam sent a muffled roar to my ears. These plumes marked the location of the new Cerro Prieto power plant in northern Mexico. The heat that drove the electric generators of Cerro Prieto was the same heat that had created the wasteland at my feet. It was the terrible heat from inside the earth.

The cold, hard crust of our planet gives

Plumes of hope in the search for energy, steam tapped from underground reservoirs roars through pressure-release vents at The Geysers steam field, where the Pacific Gas and Electric Company operates a generating plant. Steam-driven turbines produce enough power for a city of half a million. The California facility is the only one in the U. S. now turning earth heat into electric
