Summary

The dark, smooth, metallic object has a triangular component with air in the center. This object has tiny, flashing, yellow orange lights indicative of electricity. Something is generated from one direction to the other (movement) motion/circulation. Something that is long and rounded is in a bent position. Backs of people were present at one point. Every part of this object is necessary in order for it to work. Only beep beep noises were detected. Proper timing and space is important in relation to this object.
