break

Site is a <sup>complex</sup> <sup>interrelated</sup> group of structures near, or even surrounded by water. ~~Structure being~~ Structures manifest many repetitive shapes, plus many other diverse shapes. They have an "industrial" quality about them, but there seems to be a problem that hinders them from completely fulfilling their purpose. Some sort of demolition or dismantling seems to be taking place. The few workers present are cautious, tired, and somewhat worried. Site suggests some sort of nuclear plant. Structures at site manifest varied shapes: Among them round, domed building, ~~and~~ perhaps associated with tall thin cylinders, rectangular vat-like structures, brown-glass sloped structures, etc. Construction type machinery seems to be involved in an area containing "strewn rubble" with a few people "digging" thru this debris in a hurried manner suggestive of a rescue operation. Structures seemed to be of metal, masonry, & concrete with many ~~of~~ chambers completely open to the outside. Site is also suggestive of a factory or coalmine, and may be located in a Communist or Communist-controlled area.

A <sup>very</sup> large explosion took place at site, perhaps occurring "inside earth" releasing a large billowing choking cloud & creating <sup>releasing</sup> powerful chemical smelt. People present were fearful & overwhelmed by the catastrophe. Explosion may have been caused by faulty equipment; safety ratings that didn't work. People were somewhat far such eventualities, but some confusion still resulted. Explosion may have resulted from an experimental project ~~involving~~ a power device.
