hazy

Site is composed of various structures generally across an open area, evincing a "cantonment" feel. Structures (including others perhaps not site-connected) are located in a wide, low-relief area with probable farming fields/activities surrounding. A body of water is nearby over which people at site may have to cross to arrive at objective. Air-transport may be involved in this "travel," but before reaching objective people are back on ground.

An elaborate apparatus involved, which is both dark & flat. It is highly polished, & uses high power input. It involves focusing & high directivity, & has concept of "command link" input.
