A feeling of something in motion is at the target. This thing is exploratory in nature and may associated with water. The active motion of this thing is depicted on the attached sketch. Something is either moving under water perhaps in the ocean or may be in an atmosphere similar^a to space. This structure is fairly sizeable and is currently under study or used for research purposes. It reminds me of a squid in shape with long tenticle like feelers or fingers sprouting from one end of the structure providing it velocity. Running or gushing water sounds may be found in the vicinityⁱ.

*An eyeball on the enemy—day, night, or bad weather—is the final connection in the target-finding system mounted on the nose of the U. S. Army's Advanced Attack Helicopter. In simulated combat, test pilot Bill Norton (**left**) sees in his electronic monacle an image of an enemy tank (**right, at top**). As he turns his head to follow the target, sensors in the cockpit monitor the movement of his helmet and aim the weaponry automatically. At his command, a laser-guided missile fires, runs to its target, and destroys the tank (sequence at right).*
