- E. SESSION SUMMARY

The target is an open air structure wherein a person is actively physically doing something relative to this structure. Work is being done for entertainment or show and for demonstration. There are onlookers, and the activities for people performed, are within the public purview. The performance is for the purpose of successfully acting out something before your eyes almost as proof of its existence or that it can be done. It can be instructional in nature.

This targeted structure is by water. It has a limited capacity for people. Some people are highly trained/educated or skilled at what they are doing. This is relative to the group who work together. Their outward appearance, clothes, reflect what it is they do. This structure is at least bi-level in its construction, with an upper and a lower level, and a fence or railing separating the higher level deck / raised platform from the area below. This structure is not completely covered and is exposed to the elements.

What takes place here can be considered a command performance. The work performance area is elevated for onlookers to view. A refined physically skilled creative activity, is employed for the sake of acting out a demonstration which people consider interesting and enjoy seeing. There is a competitive component among men at this site.
