Site had land and water associated with it. The land was composed of many roads. There was a sailing vessel on water. People were at the site and it looked as though they were enjoying themselves. I could see people's hands moving and motioning out from their bodies. At times it looked as though they were swimming. I could see white flags. There was an object associated with the object that was big and round and it had a ring around it. This object was flying low to the ground. There may have been mountains in the back ground. I could see a young man with brown hair with a blanket away from the site, near the mountains. The site had warm weather but when you move away from the site, near the mountains, it gets colder. There may be a small airport or planes near the site. At times I could see old people away from the site and they looked like Indians. They were sitting in a natural habitat. Then at one point, I could see a young man dressed in a warrior's suit. It seemed as though much activity is associated with the site, but one can see many different things here. It seemed as though I was looking at a demonstration/parade/amusement park.

MEMORANDUM FOR: CH, ODT-S

SUBJECT: LDPS Project 92-3-L

1. All five sources agree on the presence of an evident land and water interface that is associated with the target. Indeed the emphasis was placed on the concept of "water" There were two principal concepts associated with the target. The first appeared to deal with a structure whose shape appeared to be cylindrical or oval. There appeared to be a historical and a religious significance attached to the target structure. In a second instance, the target was described as a airport. And one viewer described the structure as a dam.
