people
working
here (C)

S4 1/2 different grades or levels. Some Indians some chiefs
some in between. Specializations certain technicians can only
work on certain aspects. This has to do w/ both the
efficiency & safety. A few manager types are seen &
coordinate rest of "labor" force.

one
person

S4 1/2 younger workmate, good-natured a little less
"like" apprentice. Excited about job. Specialized. Has to
do w/ fitting, connections, tubing, "like" plumber but
more precise & specialized. Special area must be
allowed to be here. A privilege. A person gets certain
 perks for being in steel & the understanding is that
these are in return for closed-mouthedness. People here
know that if they're too careless about what they
say about the job, they not only get taken off
it, but lose their special benefits. Patriotic feel
- for the good of the "motherland". New development to
foil the plots of enemies of the homeland. Again
impressions of nuclear engineering/
words like induction flux, impulsion, capacitors,
pressure containment, closed systems. Factors of immense
force & channeled.

ADL

S4/2 Starts out low level but builds up to huge concentrated ^{energy} power levels that is all contained within the constraints of the Anlage. + there certain bodies of material upon it that are acted upon - "bombarded" - but never leave the Anlage. This ~~is~~ energy never seem to go anywhere or do anything else.

Developmental

S4/2 Experimental, high tech, exciting for people involved, has some sort of significant applications for various strategic goals - not necessarily military, but also economic.
