Site is a group of structures in a large open area w/ flat, hard manmade structures, strongly suggesting an airfield. A tall, girded structure is involved which seems to be a reception & transmission point for RF signals which are encoded & includes numbers & parameters. Site seems to be a normal functioning facility, dealing w/ routine sorts of things - i.e., it is a radar tower, it deals w/ regular message traffic (meteorology) aircraft control, etc.
