

~~SECRET~~/NOFORN - HANDLE VIA SKEET CHANNELS ONLY

PROJECT SUN STREAK (U)

WARNING NOTICE: INTELLIGENCE SOURCES AND METHODS INVOLVED

-----

PROJECT NUMBER: 8728	SESSION NUMBER: 4
DATE OF SESSION: 26 JAN 88	DATE OF REPORT: 26 JAN 88
START: 1025	END: 1130
METHODOLOGY: PENDULUM	VIEWER IDENTIFIER: 011

-----

1. (S/NF/SK) MISSION: Determine the present location of a classified document. Based upon corroborative data, the document is assumed to be located within the Washington, D.C. area.

2. (S/NF/SK) VIEWER TASKING: The viewer was provided with a wide area Washington D.C. map and a clear, square plastic block. The viewer's own pendulum was calibrated at the beginning of the session. The block was to be used to delineate specific areas (i.e., actually placed upon designated parts of the map), in turn, for which the question could be asked "is the document presently located (here)". Three runs were conducted using this technique. The first run was used to determine the sector of the city (NE,SE,SW,NW) and the other runs to determine map sheet number (see attached) and to cross-check results.

The results point to the present location of the document in question as being located within the boundaries of Map Sheet #24. As usual, the DIAC (Map Sheet #22) produced a slight amount of ambiguity (AOL).

3. (S/NF/SK) COMMENTS: This session was run jointly with Viewer 099 (see separate report). 011 feels more comfortable running pendulum exercises under controlled (monitored) conditions, vs Solo.

*27 Jan 88: as per 011 this date. target structure  
to date, is on or near Andrews AFB.*
