- E. SESSION SUMMARY:

The site has a very large vehicle type object that had many dimensions to it. There was a bottom to it that was rounded and there was a top that was rounded. There was a triangular object that held the object together. People were standing at the top of the object and it looked as though they were enjoying themselves. There was high technology associated with the vehicle and you could see some of the technology on the object. There was a large structure behind the object that was opened and rounded also. Behind this structure, there were other structures that looked like buildings. Gold and blue are associated with the site. At times, it looked as though there was another vehicle type object at the site.

People seemed to be enjoying themselves. I could see both men and women.

The concept or word "strength" seem to appear.

Water is at the site.

There is another portion to the site and that is that objects are lined up neatly in a row.
