- E. SESSION SUMMARY:

I felt that I was outside in a wide, open spacious area. Brown, blue, gold, and some green were at the site. There were mountains or hills in the background. Natural vegetation was at the site.

In front of the mountains or hills was a man made structure that was silver or white in color. This structure has many points or sharp angles associated with it. It looked as though this structure was evenly laid out in a large circular area.

The site was harsh. At one point, I had a military feeling.

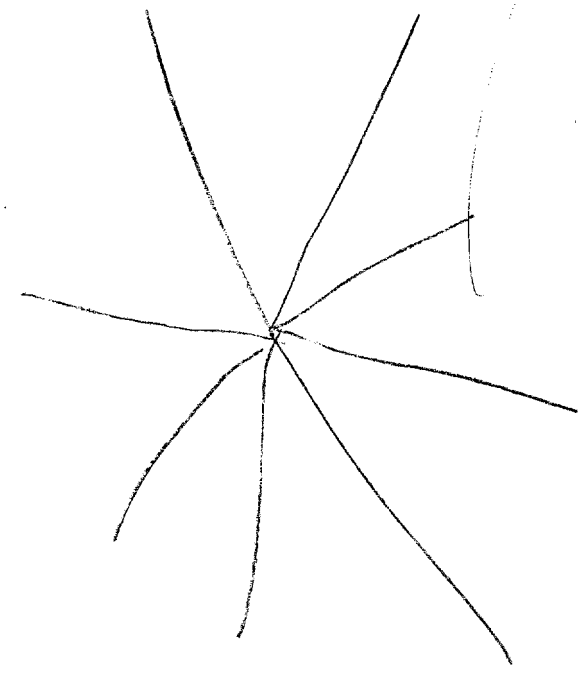

It is possible that people could be at the site.

People come here to learn or find out something. "Self-discovery"

TRACKED BY CITY PLANES and scientists in instrumented vans, the flying lab drifts over Illinois and into Indiana (map), still riding in the same cloud of pollution bequeathed by St. Louis as the day before. The drifting platform (right) provides a unique method of studying air. Airplanes cannot stay in the air long enough to be tested, and fixed, ground-based instruments can measure only the segments of air that pass by.
