LDC External Debt Positions

25X1

Summary

*Information available
as of 28 June 1985
was used in this report.*

The rate of growth of LDC debt slowed for the third consecutive year during 1984, but the magnitude of the debt continued to be a heavy burden on most LDCs. At yearend 1984, aggregate LDC external debt was nearly \$815 billion, only 3.7 percent higher than at the end of 1983. The major reasons for the slowdown were lower LDC external financing requirements and the reluctance of commercial banks to lend to financially troubled countries. Meanwhile, total LDC debt service payments rose to about \$125 billion in 1984, including as much as \$10 billion in principal arrearages. Higher interest payments were a major cause for the increase, which in turn led to a slight rise in the aggregate LDC debt service ratio. [redacted]

25X1

The distribution of LDC debt reveals a continued concentration among a small number of debtors. The 15 largest debtors accounted for nearly 70 percent of total LDC debt at yearend 1984. Except for Egypt and India, these countries depend heavily on private creditors, which hold nearly three-fourths of total LDC debt. US banks are a major source of funds for LDCs, holding about 35 percent of total Western bank claims on developing countries. [redacted]

25X1

We expect LDC debt to continue to grow at a slow pace in 1985, with total LDC debt reaching about \$850 billion by yearend. If this occurs, we project debt service payments to be on the order of \$125-130 billion in 1985. Lower world interest rates will provide some relief to LDCs, and principal repayments probably will be restructured to a large degree. Given the stagnation of LDC exports, however, the overall LDC debt service ratio will remain high and constrain improvement of their debt situations. [redacted]

25X1

Over the longer term, LDCs will face a heavy debt repayment burden for the rest of the 1980s. Most countries have been able to keep their interest payments current, but large amounts of principal repayments have been restructured and pushed back into the second half of this decade. An examination of future repayment schedules for 10 major debtors indicates that principal repayments will continue to be a major burden and that further restructurings will be necessary over the next several years. LDC External Debt Positions

25X1

LDC Debt Developments in 1984

Volume of Debt

Aggregate LDC external debt continued to rise in 1984, but the rate of growth declined for the third consecutive year (figure 1). We estimate that total LDC debt¹ grew by only 3.7 percent last year to \$815 billion, compared with rises of 8 percent in 1983, 13 percent in 1982, and 21 percent in 1981. A minimal increase in the debt of the OPEC LDCs helped hold down growth of overall external debt in 1984. Their debt—\$166 billion at the end of last year—rose by less than 1 percent, following a 9-percent rise in 1983. The non-OPEC LDCs saw their debt increase by 5 percent last year, in contrast to 8 percent in 1983.

We believe the major reason behind the slowdown in overall LDC debt growth continued to be the reluctance of creditors—primarily commercial banks—to increase their lending in the wake of ongoing LDC economic and financial problems and lower financing requirements by LDCs that had undertaken stiff austerity measures. Although both of these causes are highly interrelated, numerous financial sources indicate that, in most cases, new bank lending to financially troubled LDCs was done involuntarily in conjunction with IMF-supported adjustment programs and restructuring agreements. Overall, most new bank lending was directed to Asian countries, which have been able to avoid major debt problems and remain attractive to creditors.

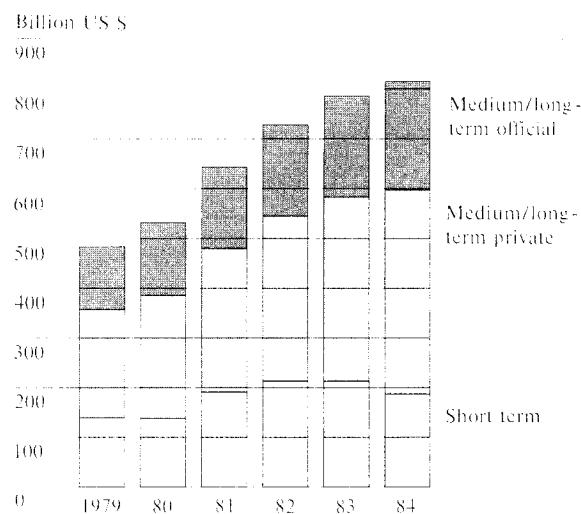

Debt Service Payments

Debt service payments by LDCs rose 13 percent in 1984 to \$126 billion, because of higher scheduled principal repayments and higher world interest rates (figure 2).² We estimate that close to 60 percent of

¹ These data constitute yearend disbursed debt of all maturities, exclusive of IMF credits and military debt, for 110 LDCs. For additional methodological details, a discussion of the sources for the data used, and a list of the LDCs in our data base, see appendix A.

² Debt service includes principal repayments on medium- and long-term debt and interest payments on debt of all maturities.

Figure 1
Aggregate LDC External Debt,
1979-84

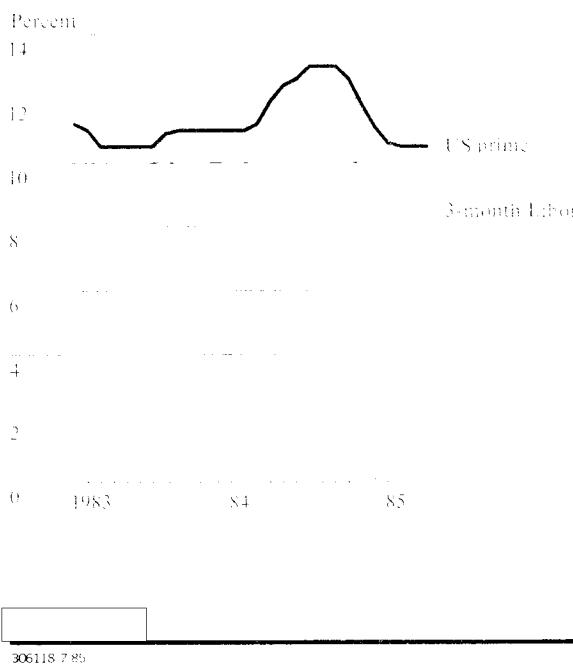

306117 785

total LDC debt is on floating interest rates. This total includes roughly \$58 billion in principal and \$68 billion in interest charges, according to our estimates. Also in this total are as much as \$10 billion in arrearages, which, if excluded, bring debt service payments down to about \$115 billion. This amount, however, is still higher than for 1983.

The aggregate LDC debt service ratio³ inched up from 21 percent in 1983 to 22 percent last year because debt service payments rose faster than LDC exports of goods and services. In contrast, the interest portion of total LDC debt service showed a slight

³ Throughout this paper, the debt service ratio is defined as total debt service (medium- and long-term principal plus interest on debt of all maturities) as a share of exports of goods and services.

Figure 2
Major World Interest Rates, 1983-85

decline for the second consecutive year from 56 percent in 1983 to 54 percent in 1984. Interest payments last year, however, remained equivalent to 12 percent of goods and services, unchanged from 1983. This ratio is important because interest payments are considered essential for LDCs to maintain minimum credit standing with banks, whereas principal repayments can be rolled over or delayed. Although principal as a share of exports of goods and services increased in 1984 relative to 1983, if arrearages are excluded the ratio was about the same in those two years. [redacted]

Major Creditors

Private creditors—mainly commercial banks—continue to be the most important source of funds for LDCs. For the fourth straight year, private creditors accounted for nearly two-thirds of total LDC medium- and long-term debt. If short-term debt is included, private creditors held almost three-fourths of total LDC debt in 1984. [redacted]

US banks remain major holders of LDC debt (table 1). According to Bank for International Settlements (BIS) data, US bank claims on LDCs totaled about \$130 billion at the end of June 1984, representing 35 percent of total bank claims on LDCs. Latin America accounted for about \$85 billion in US bank claims, followed by East Asia with about \$30 billion. The largest individual debtors to US banks at the end of June 1984 were Mexico, Brazil, Venezuela, and South Korea. [redacted]

25X1

With the exception of British and West German banks, debt data for non-US bank creditors are largely unavailable. UK bank claims on LDCs totaled about \$52 billion in mid-1984, or about 14 percent of total BIS-reported bank claims on LDCs. Latin American debtors owed more than \$29 billion, with Brazil, Mexico, and Argentina the three largest debtors to UK banks. [redacted]

25X1

Complete data on consolidated West German bank claims became available recently; heretofore, only partial data had been available. Yearend 1984 is the only time period for which data are available. Overall, West German banks are less exposed to LDCs than US or UK banks, with Brazil (\$4.8 billion), Mexico (\$3.5 billion), Argentina (\$2.4 billion), Venezuela (\$1.9 billion), Indonesia (\$1.9 billion), and Nigeria (\$1.5 billion) the largest individual debtors to West German banks at yearend 1984. Overall, West German banks account for about 9 percent of total Western bank claims. [redacted]

25X1

Distribution of Debt

LDC external debt remains concentrated in a small number of countries. The 15 largest debtors accounted for nearly 70 percent of total LDC debt in 1984 (table 2). In addition, nearly half of LDC debt is held by the top seven debtors. With the exception of Egypt and India, all of the countries depended heavily on private sources of financing. From a regional standpoint, distribution of debt remained heavily weighted toward Latin America in 1984, which holds 47 percent of total LDC debt, more than double any other group (figure 3). The region consisting of North

Africa, the Middle East, and South Asia accounted for 22 percent of the total with East Asia close behind at 21 percent. The remaining 10 percent was held by Sub-Saharan Africa.

probably will increase by 8 to 10 percent, but private creditors—primarily commercial banks—probably will boost their lending by only 3 to 5 percent.

commercial banks are unwilling to extend any new medium-term loans to most LDCs unless forced to do so in financial rescue packages in conjunction with the IMF. Most of the increase in bank lending will continue to come in the form of short-term, trade-related credits because of their less risky nature.

Outlook for 1985

Based on discussions with financial experts and a review of financial publications, we expect LDC debt to continue to grow at a slow pace in 1985. If this occurs, LDC external debt will reach about \$850 billion by yearend. Lending from official sources

^a Contains public-sector debt only.

We project that LDC debt service payments will be about \$125-130 billion in 1985, about the same as last year. Continued debt reschedulings and lower interest payments will offset the overall growth of the debt stock, keeping debt service payments from rising rapidly. This should provide some relief to the overall LDC payments position. Given the stagnation of LDC exports, however, the aggregate LDC debt service ratio will remain high and constrain improvements in their debt situations.

25X1

Although the LDCs have made some progress in managing their heavy debt burden, debt service payments will remain onerous for the next several years (table 3). For some major debtors, past restructurings have created new repayment schedules that cause scheduled principal repayments to peak during the second half of the 1980s. As a result, LDCs will need to restructure their debt for the foreseeable future if large sources of new financing are not available.

25X1

25X1

LDC Debt: A Regional View

Latin American countries were the most dependent on private sources of funds among LDC regions, with 87 percent of the group's debt owed to private creditors. US banks provided more than 26 percent of the private total. The 1984 aggregate debt service ratio for Latin America was 42 percent, sharply higher than the LDC average of 22 percent. In addition, the aggregate debt-to-exports ratio of 301 percent and the aggregate interest-to-exports ratio of 28 percent were more than double the LDC averages of 144 percent and 12 percent, respectively. [redacted]

25X1

Nearly 75 percent of East Asian debt in 1984 was owed to private creditors, with US banks holding more than 20 percent. The group's 1984 debt service ratio of 14 percent remained the lowest of any region, while the debt-to-exports ratio of 90 percent was well below the LDC average. East Asian countries—with the exception of the Philippines—remained the most creditworthy LDCs in the view of lenders during 1984. [redacted]

25X1

In North Africa, the Middle East, and South Asia, slightly more than half of the 1984 debt was accounted for by private sources, and only about 11 percent of this total was held by US banks. The group's debt service ratio of 16 percent was well below the LDC average, and the debt-to-exports ratio of 86 percent and interest-to-exports ratio of 6 percent were the lowest among all LDC regions. This is because of the presence of several OPEC nations that are not major debtors but have substantial exports. [redacted]

25X1

Private creditors held more than 54 percent of Sub-Saharan Africa's total debt in 1984. Only about 7 percent of the private figure, however, was owed to US banks. Two countries—Nigeria and the Ivory Coast—together accounted for 50 percent of the region's debt from private sources but only about 10 percent of Sub-Saharan Africa's total official debt. Excluding these two countries, more than 60 percent of the region's debt is owed to official sources. The group's debt service ratio of 32 percent and debt-to-exports ratio of 217 percent each were slightly above the LDC average. [redacted]

Appendix A

Methodology

Sources of Data

The primary data sources used for our debt and debt service estimates are *World Debt Tables* (WDT), published by the International Bank for Reconstruction and Development (IBRD); *International Financial Statistics* (IFS), published by the IMF; and *Maturity Distribution of International Bank Lending*, published by the Bank for International Settlements (BIS). The WDT provides information through 1983 on medium- and long-term debt and debt service positions for 105 countries. It compiles all medium- and long-term debt of governments and official agencies as well as private-sector debt guaranteed by an official agency in the debtor country. The WDT also supplies estimates on private nonguaranteed debt and debt service for 21 countries. [redacted]

The IFS publishes information on foreign bank assets—broken down by interbank loans and loans to nonbanks—in developing countries and on foreign nonbank deposits in LDC banks. The data come from the banking authorities in the G-10⁴ countries, Austria, Bahrain, Denmark, Hong Kong, Ireland, and Singapore, and from information provided by the monetary authorities of more than 100 developing countries. Most of the information is current to yearend 1984. [redacted]

The semiannual BIS publication⁵ provides information on external assets of commercial banks located in the G-10 countries, Austria, Denmark, Ireland, and certain foreign affiliates, with the most recent data being the positions at the end of June 1984. External assets include bank loans and other debt instruments held by reporting banks, such as bonds. The assets are broken down by debt maturing in one year or less, debt maturing within one to two years, and debt maturing in two years and beyond. [redacted]

⁴ The Group of 10 includes 11 nations: the United States, West Germany, the United Kingdom, France, Italy, Japan, Canada, the Netherlands, Belgium, Sweden, and Switzerland. [redacted]

⁵ The BIS also publishes a quarterly report on the asset position of Western banks, but it does not break down the data by maturities. [redacted]

Another important source of data is the OECD, which provides debt and debt service estimates for both official and private nonguaranteed debt through 1983. Its compilers attempt to include debt of all maturities by individual country; however, short-term debt estimates are available only for 1982 and 1983. In addition, the OECD covers all developing countries. Other data sources we have used include debt estimates made by LDC governments, embassy estimates, and open-source reports. [redacted]

25X1

Estimating Medium- and Long-Term Debt

For most countries, we estimated medium- and long-term debt from WDT, IFS, and BIS data. Data on debt from official sources were taken from the WDT. The base for debt from private sources was derived by taking WDT data on disbursed debt owed to financial markets and comparing it with medium- and long-term debt estimates derived from IFS and BIS data. [redacted]

25X1

To obtain IFS/BIS estimates of medium- and long-term debt held by foreign banks, we subtracted BIS assets maturing within one year from total BIS assets, and then added the prior year's BIS assets maturing within one to two years. We then compared total BIS assets with IFS foreign bank assets located in developing countries. If the IFS total exceeded the BIS number, we multiplied the IFS number by the ratio of the BIS medium- and long-term estimate to total BIS assets. [redacted]

25X1

If the IFS or BIS estimate on medium- and long-term debt exceeded the WDT debt owed to financial markets, it was used instead of the WDT figure. When the WDT had data on nonguaranteed debt, the IFS or BIS medium- and long-term estimate was compared with the WDT total debt—including private nonguaranteed—owed to financial markets. In cases where the IFS or BIS estimate exceeded the WDT estimate, that amount again was used in place of the WDT figure. [redacted]

25X1

25X1

25X1

25X1

Confidential

To obtain 1984 debt estimates, we projected the WDT 1983 estimates and the end-June 1984 BIS data to yearend 1984 and then followed the same procedure. Although the WDT does not have 1984 individual country estimates, it does publish aggregate estimates under regional country groupings. These aggregates are divided between debt owed to official and private sources. To obtain specific country base estimates on official and officially guaranteed debt for 1984, we multiplied the 1983 WDT debt totals for each LDC by 1 plus the percentage change from 1983 to 1984 of the WDT aggregate debt estimates. [redacted]

To obtain yearend 1984 BIS estimates on medium- and long-term debt owed to banks, we multiplied the BIS end-June 1984 semiannual data by 1 plus the percentage change in total bank assets from the end of June to the end of December 1984 as given in the BIS quarterly report on the external positions of banks. We also used OECD data to form a base estimate for countries that do not report their debt to the IBRD, or in instances where we believed a large portion of nonguaranteed debt was not caught by the WDT, IFS, or the BIS. [redacted]

Once the base estimates on medium- and long-term debt were made, we used other information to adjust the estimates. For example, we used 1984 debt estimates published by the IBRD when available. In addition, we used embassy, LDC government, and open-source reports to adjust the base estimates. [redacted]

Estimating Short-Term Debt

For most countries, we estimated short-term debt by first subtracting our BIS medium- and long-term debt estimates from total BIS assets. When the IFS debt held by foreign banks exceeded the BIS number, we multiplied the IFS total by the ratio of the BIS short-term estimate to total BIS assets. We then added the short-term estimate derived from the BIS or IFS to the IFS data on nonbank deposits in developing country banks to get a base estimate. Open-source data were used when available. We did not make short-term debt estimates with BIS or IFS data for countries where major offshore banking activities were present because of the inability to separate loans used by the host country and loans involved in the offshore banking facilities. For these countries—The Bahamas, Bahrain, Barbados, Hong Kong, Lebanon,

Liberia, Panama, Singapore, and Vanuatu—we used the OECD figures for 1982 and 1983 and estimated the remaining years from these data. [redacted]

25X1

Quality of Debt Statistics

In our judgment, these debt estimates can be viewed as minimum levels. For many countries, there are data gaps, especially in the area of short-term debt and private nonguaranteed debt. For example, our short-term debt estimates generally cover debt held by banks and nonbank deposits in LDC banks but exclude nonbank, trade-related credits. Recent data published jointly by the OECD and BIS, however, capture some of the nonbank, trade-related debt, and this information has been incorporated where possible. [redacted]

25X1

Countries in the Data Base

Our data base comprises 110 LDCs, including 97 non-OPEC and the 13 OPEC countries:

Appendix B

Interest Cost and Currency Composition of LDC Debt

The external debt of developing countries is composed of different types of loans that vary with respect to interest cost and availability for different borrowers. Bilateral and multilateral Official Development Assistance (ODA) loans are the least expensive form of credit. The OECD estimates that the average interest cost on outstanding ODA loans is roughly 2 percent. The major recipients of ODA credits are the poorer developing countries that generally are unable to attract loans from commercial banks. []

The average interest costs on outstanding medium- and long-term export credits, multilateral nonconcessional loans, and bonds is about 8 to 9 percent, according to OECD estimates. Export credits, the bulk of which are on fixed interest rates, consist of direct official financing, supplier credits, and subsidized or guaranteed credits financed by commercial banks. We estimate that roughly a third of all export credits are bank financed. Bonds and nonconcessional multilateral lending generally are also on fixed-interest terms. []

In addition to export credits, commercial banks provide medium- and short-term financial credits. Medium-term credits are the most expensive for LDCs because most of them are based on floating interest rates such as LIBOR or US prime. We estimate that the average interest cost of floating-rate debt was around 13 percent in 1984. Financial credits are concentrated in the higher income developing countries. Short-term credits include loans with an original maturity of less than one year along with outstanding lines of credit. []

The currency composition of LDC debt also varies widely among debtors and the type of credit. The US dollar is by far the dominant currency among loans to LDCs. According to OECD estimates, 56 percent of all medium- and long-term debt is denominated in US dollars. Meanwhile, the IBRD estimates that 76 percent of public and publicly guaranteed medium- and long-term debt is dollar-denominated, with the

next highest currencies being the Japanese yen (6 percent), the deutsche mark (5 percent), and the French franc (3 percent). The US dollar also is dominant in most LDC regions, such as Latin America (89 percent of public medium- and long-term debt), East Asia (68 percent), and Sub-Saharan Africa (54 percent), according to the IBRD. The OECD estimates that some 80 percent of total short-term debt is in US dollars. []

Appendix C

Debt Service Projections for 10 Major Debtors

For most of the larger debtors, financial observers have examined future debt repayment schedules in an attempt to highlight potential problem years. Although future interest payments vary according to the level of market interest rates, principal repayments are fixed and may be concentrated in certain years. These humps in debtors' repayment profiles can pose major problems for the individual countries, with the remedy being additional new borrowing or debt rescheduling.

while Malaysian and Nigerian principal repayments jump in 1987. For some countries, such as Mexico and the Philippines, debt reschedulings have smoothed their repayment schedules over the next several years. The data reflect only debt incurred through 1984.

25X1

The greatest attention is focused on those LDCs that rely heavily on private creditors as sources of funds. Debtors that borrow primarily from official sources generally have long repayment periods on those loans, which usually do not result in bunching of principal. On the other hand, debtors with large amounts of private-sourced debt are susceptible to humps in repayments because of the shorter loan maturities and the larger volume of debt owed. Moreover, the increased frequency of debt reschedulings has contributed to the bunching of principal repayments.

25X1

Compiling accurate data on future principal repayments is difficult for several reasons. One is the lack of information on private nonguaranteed debt. We have developed a methodology for estimating the stock of nonguaranteed debt, but estimation of the repayment schedule requires information on the terms of the loans, which is usually unavailable. A second problem concerns future borrowings and additions to the debt stock. Although repayment data are available for existing debt, only general assumptions can be made about the principal repayments on future loans. Finally, adjustments to future principal repayments, such as prepayment or cancellation, are impossible to predict.

25X1

An examination of future principal repayments for 10 major LDCs reveals that bunching of repayments occurs for different countries at different times. For example, Argentina and Brazil have bulges in 1986,

Key Statistical Series

This section contains the aggregate individual debt tables for the 110 LDCs covered in this paper, along with other pertinent statistical series, including three debt ratios: total yearend debt to exports of goods and services; total debt service to exports of goods and services; and total interest payments to exports of goods and services.
