The following intelligence organizations participated in the preparation of this estimate:

The Central Intelligence Agency and the intelligence organizations of the Departments of State and Defense, NSA, AEC, and the FBI.

Concurring:

Lt. Gen. R. E. Cushman, Jr., the Deputy Director of Central Intelligence

Dr. Ray S. Cline, the Director of Intelligence and Research, Department of State

Lt. Gen. Donald V. Bennett, the Director, Defense Intelligence Agency

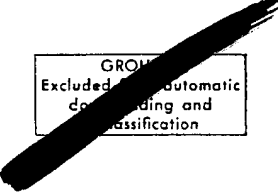

Dr. Louis W. Tordella, for the Director, National Security Agency

Dr. Charles H. Reichardt, for the Assistant General Manager, Atomic Energy Commission

Mr. William C. Sullivan, the Assistant Director, Federal Bureau of Investigation

WARNING

~~This material contains information affecting the National Defense of the United States within the meaning of the espionage laws, Title 18, USC, Secs. 793 and 794, the transmission or revelation of which in any manner to an unauthorized person is prohibited.~~

THE CLANDESTINE INTRODUCTION OF NUCLEAR WEAPONS INTO THE US

THE PROBLEM

To assess the capabilities of foreign nations to introduce nuclear weapons clandestinely into the US, and to estimate the likelihood of such introduction over the next few years.¹

THE ESTIMATE

I. INTRODUCTION

1. In considering the clandestine introduction of nuclear weapons into the US, leaders of any nation would have to weigh any possible advantages against the grave consequences which would follow from discovery. Despite all precautions there would always be risk of detection arising not only from US security measures, but also from the chance of US penetration of the clandestine apparatus, the defection of an agent, or sheer accident. The enemy leaders would almost certainly judge that use of this tactic would be regarded by the US as a warlike act, if not as a cause for war, and that it would precipitate an international political crisis of the first magnitude.

2. We believe, therefore, that no nation would consider this course except possibly in the context of planning an attack on the US, of deterring the US from an attack on itself, or conceivably as an act of deception designed to embroil the US with a third power. It is inconceivable to us that any nation would plan an attack which relied on the clandestine introduction of sufficient quantities of nuclear weapons to have a decisive effect on the outcome of a war. Any plans for their use, we believe, would envision the use of limited quantities to achieve results unattainable by other means.

¹ This estimate supersedes only that portion of NIE 4-68, "The Clandestine Introduction of Weapons of Mass Destruction into the US," dated 13 June 1968, TOP SECRET, RESTRICTED DATA, which pertains to nuclear weapons. The judgments in NIE 4-68 regarding the clandestine introduction of other weapons of mass destruction are considered to be still valid.

FORMERLY RESTRICTED DATA

3. Only four foreign nations—the USSR, the UK, France, and Communist China—have developed and tested nuclear weapons. Beyond these, only India and Israel may do so over the next several years. We can foresee no changes in the world situation so radical as to motivate the UK, France, or any of the potential nuclear powers to attempt to clandestinely introduce nuclear weapons into the US. For this reason, the balance of this discussion will be concerned only with the remaining nuclear powers, the Soviet Union and Communist China.

II. SOVIET AND CHINESE CAPABILITIES

4. Both the USSR and Communist China can produce nuclear weapons which could be adapted for clandestine introduction into the US. We estimate that the Soviets have a broad spectrum of weapons ranging from 150 pounds in weight and yielding .25-15 KT up to very large ones having yields of many megatons and weighing thousands of pounds. Current Chinese weapons are probably fairly large and would probably require more detailed assembly and check out after being brought in than would Soviet designs. The Chinese have introduced plutonium into their weapon design and could have a composite weapon weighing about 1,200 pounds with a yield of 50 KT; they could have a weapon in the megaton range weighing about 3,000 pounds. To date the Chinese have not to our knowledge tested a gun-assembly weapon. With their present technology they could develop one yielding about 20 KT and weighing 500-1,000 pounds but because of the heavy requirements of such weapons for U-235, they probably will not do so.

5. Nuclear weapons with weights of up to a few thousand pounds could be brought across US borders by common means of transport without great difficulty but not without some risk. The difficulties and risks of introducing larger weapons into the US, even in a disassembled state, are probably sufficiently great to seriously discourage such attempts. Such devices could be carried in by fishing boats or similar small craft to which transfer had been made at sea. Any weapon could be brought into US waters in merchant ships and detonated without removal from the ship.

6. Soviet capabilities to introduce nuclear weapons secretly are much greater than Chinese. We believe that if either country undertook such a program, they would rely on their own agent organizations rather than on political sympathizers in the US. Soviet intelligence services have assigned a high priority to the development of espionage and sabotage capabilities in the US and presumably have formed an organization for the latter purpose. Should the Soviets undertake the clandestine introduction of nuclear weapons, they almost certainly would employ the highly trained and reliable agents of these services. They could also employ diplomatic personnel and could bring in weapons or weapon components under diplomatic cover. The large diplomatic establishments in Canada and Mexico could serve as bases for the operation.

7. There are no Chinese Communist diplomatic establishments in the US, Canada, or Mexico. Their absence precludes the use of diplomatic cover for the clandestine introduction of nuclear weapons or their components and the use of secure diplomatic communications for planning and control of such an operation; it also makes more difficult the introduction and control of agents. Nevertheless, the Chinese could introduce agents under the guise of bona fide immigrants. X

8. In considering Soviet and Chinese capabilities, we have also considered the possibility that a third country might assist the USSR or China in the clandestine introduction of nuclear weapons into the US. We consider this highly unlikely on two counts. We doubt that either the Soviets or the Chinese would seek to enlist the aid of another nation in such a sensitive undertaking. And if they should, that nation's leaders would almost certainly react unfavorably to a proposal that could jeopardize their national survival merely to support Soviet or Chinese policy.

III. STRATEGIC CONSIDERATIONS

9. If the Soviets or Communist Chinese have considered the clandestine introduction of nuclear weapons into the US, they have almost certainly been influenced by the same general considerations: the element of risk, the opportunities for clandestine introduction, and the results that could be achieved. The two countries, however, occupy vastly different strategic positions vis-a-vis the US. The Soviets and Chinese, therefore, might see the clandestine introduction of nuclear weapons in a somewhat different light.

10. The USSR. The Soviet leaders, like those of the US, must take account of the possibility of general war in their military planning. In such planning, the Soviets would consider the clandestine introduction of nuclear weapons into the US, if at all, only as a supplement to the main attack by their large strategic attack forces. Because they have already achieved an assured retaliatory capability, they would probably consider a clandestine emplacement effort as potentially useful only in support of a deliberate or pre-emptive Soviet attack and directed toward delaying or reducing a US retaliatory attack. Possible targets might include important government headquarters, key military command and control facilities, missile detection and tracking radars, and possibly some alert forces. The Soviets would recognize, however, that even if such an effort were successful, it could not prevent US retaliation or reduce it to what they would consider an acceptable level.

11. In considering clandestine attack as a supplement to other weapons, the Soviets would have to weigh their ability to initiate such attack rapidly, with little preparation, and in close coordination with the main weight of attack. Thus, in a preplanned attack clandestinely introduced weapons would have to be in position at the time the attack was launched. In the case of a pre-emptive

~~TOP SECRET~~
FORMERLY RESTRICTED DATA

attack the circumstances would not allow sufficient time for the introduction and delivery of such weapons after a decision to pre-empt. To prepare for this contingency beforehand, the Soviets would have to accept the risk of maintaining weapons in the US for an indefinite period of time. These difficulties would not obtain if the USSR decided deliberately to initiate general war in a period of low tension; weapons could be introduced into the US a relatively short time before use. But the Soviets would have to consider the risk of jeopardizing the element of surprise on which this course of action relies, and that discovery would have severe and unpredictable repercussions, possibly including a US pre-emptive attack which would be disastrous for the USSR. For these reasons, we think it highly unlikely that the USSR will attempt to introduce nuclear weapons clandestinely into the US.

12. Communist China. The Chinese have no capability at present to attack the US with nuclear weapons. They probably have an ICBM system in the early stages of development, which could become operational several years from now. In the interim, they might see some advantages in clandestinely introducing and emplacing nuclear weapons in the US. Inasmuch as they could not deliver such an attack on a scale sufficient to achieve a decisive military objective, their object would presumably be to deter the US from a course of action that gravely threatened their national security. Consequently, the most likely targets would be population centers. will change

13. Clearly, the Chinese would also see grave disadvantages in such a move. So long as the US was unaware of their existence, the concealed weapons would have no effect upon its actions. Indeed, the risk of their discovery would be an ever-present, continuing danger to the Chinese themselves. Once the Chinese announced that nuclear weapons were emplaced in the US, the announcement would touch off an intensive search and extraordinary security measures. Moreover, the Chinese could not be sure that the US would in fact be deterred. On the one hand, the US might consider such an unverified announcement as a mere bluff. On the other it might take the clandestine introduction of such weapons as a *casus belli* and, having taken such actions as it could to safeguard its population, launch a devastating nuclear attack on China. In any case, the US would almost certainly seek to render the clandestinely introduced weapons unusable by threatening and preparing to deliver a devastating retaliatory attack in the event of their use. It is conceivable that some Chinese regime might be willing to accept such risks of national destruction, but we think it highly unlikely.

14. Finally it is conceivable that the Chinese Communists might seek to introduce into the US a nuclear device with the intention of detonating it under certain circumstances—i.e., in a period of great tension between the US and the USSR—in hopes that it would lead US authorities to conclude that the action had been perpetrated by the Soviets. Alternatively, the Chinese Communists might think it worthwhile to introduce into the US a nuclear device so constructed as to

~~TOP SECRET~~

5

appear to be of Soviet origin, and intended not to be detonated but to be discovered by US authorities. In the first case, the purpose would be to touch off a war; in the second, it would be to produce a serious crisis between the US and the USSR—a crisis which could serve Chinese interests. But it is unlikely that either deception would succeed; the procedures would be subject to most of the other difficulties discussed above, and we consider it highly unlikely that the Chinese would attempt either.

CENTRAL INTELLIGENCE AGENCY

DISSEMINATION NOTICE

1. This document was disseminated by the Central Intelligence Agency. This copy is for the information and use of the recipient and of persons under his jurisdiction on a need-to-know basis. Additional essential dissemination may be authorized by the following officials within their respective departments:

- a. Director of Intelligence and Research, for the Department of State
- b. Director, Defense Intelligence Agency, for the Office of the Secretary of Defense and the organization of the Joint Chiefs of Staff
- c. Assistant Chief of Staff for Intelligence, Department of the Army, for the Department of the Army
- d. Assistant Chief of Naval Operations (Intelligence), for the Department of the Navy
- e. Assistant Chief of Staff, Intelligence, USAF, for the Department of the Air Force
- f. Director of Intelligence, AEC, for the Atomic Energy Commission
- g. Assistant Director, FBI, for the Federal Bureau of Investigation
- h. Director of NSA, for the National Security Agency
- i. Director of National Estimates, CIA, for any other Department or Agency

2. This document may be retained, or destroyed by burning in accordance with applicable security regulations, or returned to the Central Intelligence Agency by arrangement with the Office of National Estimates, CIA.

3. When this document is disseminated overseas, the overseas recipients may retain it for a period not in excess of one year. At the end of this period, the document should either be destroyed, returned to the forwarding agency, or permission should be requested of the forwarding agency to retain it in accordance with IAC-D-69/2, 22 June 1953.
