The
National Cryptologic School is pleased to announce the

SEMINARS for ENGINEERING EXECUTIVES

No. 951

28 February 1985

ENGINEERING ANOMALIES RESEARCH

SEMINAR DESCRIPTION: This seminar will seek to address consciousness-related anomalous phenomena that appear to have possible relevance to modern engineering practice. Studies now underway use state-of-the-art instrumentation, data and modern acquisition and processing equipment and techniques to identify those engineering systems and processes most likely to display operator-related anomalies. Three areas are under particular scrutiny: experiments in low-level psychokinesis, assessment of precognitive remote-perception data, and development of theoretical models to correlate data and explain the phenomena.

Scholarly research into psychic phenomena over the past century has produced provocative results, but none that are regarded as convincing in the traditional scientific sense. Yet the potential implications of such phenomena are considered to be so profound and pervasive for many fields of human endeavor, that efforts toward demonstration and resolution continue in several disciplines. The field of engineering, in particular, is seen to present a multitude of situations that may be vulnerable to psychic interactions. Many feel that it behooves the engineering profession to examine the possibility of psychic interactions in a controlled manner. This seminar sets forth some concrete plans in this direction.

~~FOR OFFICIAL USE ONLY~~

STUDENT QUALIFICATIONS: Because of high interest in this subject matter, applications are expected to exceed accommodations. Therefore, acceptance will be according to prioritized student listings forwarded by memorandum to the NCS Engineering Division (E51). Managers, GGD-14 and above, will be given first preference.

LECTURERS: Dr. Robert G. Jahn, Dean
Ms. Brenda J. Dunne, Laboratory Manager
Princeton University School of Engineering/
Applied Science

DATE: 12 April 1985

TIME: 0900 - 1500

LOCATION: FANX III Auditorium (Room B1123)

SECURITY CLEARANCE: No clearances required.

ALLOCATIONS: Open (80)

ATTENDANCE: Applicants should submit names to element Training Coordinators, who should submit, by memorandum, to E51, by 8 April 1985.

POINT OF CONTACT: For additional information, please contact E51, on extension 968-8003s/859-6328b.
