14 December 1966

MEMORANDUM FOR THE RECORD

SUBJECT: Trip to LTV Electrosystems, Greenville, Texas
7 Dec - 8 Dec 1966

1. On December 7, I went to LTV to observe the progress of the modification of the SP-2H Multisensor System and finish off the test schedule with Dave Lane and Chuck Michelsen.

2. I brought back a somewhat optimistic project test schedule of what LTV plans to do on CHIGOE from now until the end of January. The schedule has already slipped a week since I was down at LTV. The reason for the slippage is Litton's inability to solve a voltage sensitivity problem in their LN-15 inertial platform. Without the LN-15 no integrated navigation flight tests can be performed.

3. I discussed with Cliff Slagle the addition of a data annotation block on the D-5 camera. The only camera that now has a data block on the film is the KA-53 which is primarily a day time camera. Seeing that many of our missions will be at night, I believe it will be advantageous to have a data block on the D-5 or D-10 if we use it.

4. The main problems confronting CHIGOE at this time are the LN-15 and the unresolved problem of Dalmo-Victor's LLLTV.
