CAMBIO

1. For your information, we are passing along ZACALICO's evaluation of the generator photos transmitted with M.B. 11735, 11700 and 11770: "In the absence of collateral information, it is impossible to estimate the significance or the intelligence value of the photographs. Furthermore, in the absence of knowledge of the character of the source, we suspect that all of the submitted photographs are fabrications. We suggest that the source be investigated in order to determine whether or not he is trustworthy before any further attempt is made to elicit information of intelligence value."
2. ZACALICO evaluations of the plaques and tube sent with M.B. 11717 and 11701 are as follows: These plaques and tube are fabricated and have no authenticity.
3. M.B. 11566 was evaluated as follows:
It is not normal for uranium ore trains to be dispatched from Siegen-Schwarze although there have been some indications that a small amount of ore is sent to Chemnitz and is prepared for shipment there. The normal number of freight cars in a uranium train from Siegen is 45 to 50 instead of the 6 to 14 mentioned in this report.
4. Journals on M.B. 11490 were dispatched as MOXW 10363, dated 24 August.
5. According to ZACALICO, M.B. 11643 and 11370 could not be judged.
6. There was no dissemination of M.B. 12034 since the information was considered trivial.
7. The sole good evaluation of a CAMBIO report would seem to be ZACALICO's evaluation of M.B. 11567, which was: This is a good report (sic) and contains considerable detail.

8. While the above evaluations do not cover all reports by this source, it is felt that they are highly indicative. Most of the reports were of such a nature that it was impossible to check or evaluate them.
